

Part 1

1. Bitwise Operators

```
public class Part1_Bitwise {  
    public static void main(String[] args) {  
  
        int a = 8;  
        int b = 2;  
        int c = 7;  
        int d = 8;  
  
        boolean result1 = (a > b) & (c > b);  
        System.out.println(result1);  
  
        int result2 = a | b;  
        System.out.println(result2);  
  
        boolean result3 = (a < b) ^ (c < b);  
        System.out.println(result3);  
  
        int result4 = c | d;  
        System.out.println(result4);  
    }  
}
```

2. Ternary Operator

```
public class Part1_Ternary {  
    public static void main(String[] args) {  
  
        int x = 20;  
        int y = 15;  
  
        boolean result1 = (x > y) ? true : false;  
        System.out.println(result1);  
  
        boolean result2 = (x < y) ? true : false;  
        System.out.println(result2);  
  
        int result3 = (x > y) ? 25 : 0;  
        System.out.println(result3);  
  
        int result4 = (x < y) ? 30 : 30;  
        System.out.println(result4);  
    }  
}
